KEEP OUT OF REACH OF CHILDREN
READ SAFETY DIRECTIONS BEFORE OPENING OR USING

CAUTION

ACTIVE CONSTITUENT: 480 g/L BENTAZONE
present as sodium salt

For selective post-emergence control of certain broadleaf weeds in Green, (Dwarf French) Beans, Navy (Haricot) Beans, Peanuts, Red Kidney Beans, Red Mexican Beans and Soybeans as per the Directions for Use table.

IMPORTANT: Read this booklet before use.

APVMA Approval No: 69311/60457

DIRECTIONS FOR USE

RESTRAINTS:
DO NOT apply under hot, dry conditions.

CROP | WEEDS | STATE | RATE/ha | WHP | CRITICAL COMMENTS
--- | --- | --- | --- | --- | ---
**Broad beans** | Black bindweed (*Polygonum convolvulus*), Blackberry nightshade (*Solanum nigrum*), Corn spurry (*Spergula arvensis*), Fat hen (*Chenopodium album*), Fumitory (*Fumaria muralis*), Hedge mustard (*Sisymbrium officinale*), Shepherd’s purse (*Capsella bursa-pastoris*), Wild radish (*Raphanus raphanistrum*), Wild turnip (*Brassica rapa campestris*) | Tas only | 1 L | 5 weeks | Apply when weeds are less than two true leaves.
|  |  |  | 2 L | Apply when broad bean plants are at the two leaf stage or earlier and weeds are less than 5 cm high.
|  |  |  | 3 L | Ensure weeds are less than 5 cm high, and broad bean plants are developed past the two leaf stage.
|  |  |  |  | Sequential applications may be necessary to achieve satisfactory weed control, but no more than two applications should be used and the total rate applied should not exceed 3 L/ha.
|  |  |  |  | The addition of a non-ionic surfactant such as *BS1000 at 125 mL per 100 litres of the spray volume is necessary for optimum weed control.
**Green beans** | Thornapples (*Datura spp.*) | Qld, NSW, Vic, WA only | 1.5 L or 2 L | 5 weeks | Apply low rate when weeds are cotyledon to 4 leaves and high rate when 5 to 8 leaves.
|  | Noogoora burr (*Xanthium pungens*) |  | 2 L | Apply low rate when weeds are cotyledon to 3 leaves and high rate when 4 to 6 leaves.
|  | Annual ground cherry (*Physalis angulata*), Apple of Peru (*Nicandra physalodes*), Bellvine (*Ipomoea plebeia*), Cobbler’s pegs (*Bidens pilosa*), Star burr (*Acanthospermum hispidum*), Variegated thistle (*Silybum marianum*) |  |  | Apply when weeds are cotyledon to 4 leaves.
|  | Fat hen (*Chenopodium album*), Hedge mustard (*Sisymbrium officinale*), Shepherd’s purse (*Capsella bursa-pastoris*), Wild turnip (*Brassica rapa campestris*), Wild radish (*Raphanus raphanistrum*) | Vic, SA only | 3 L | Variegated thistle should be less than 15 cm in diameter. Annual ground cherry should be less than 1.5 cm high.
|  | Anoda weed (*Anoda cristata*), Hairy wandering jew (*Commelina benghalensis*) | Qld only | 2 L | Control of bellvine may be inconsistent if soil is dry.
|  |  |  |  | Apply when weeds are cotyledon to 3 leaves.
**Navy beans** | Thornapples (*Datura spp.*) | Qld, NSW, Vic, WA only | 1.5 L or 2 L | 8 weeks | Apply low rate when weeds are cotyledon to 4 leaves and high rate when 5 to 8 leaves.
|  | Noogoora burr (*Xanthium pungens*) |  | 2 L | Apply low rate when weeds are cotyledon to 3 leaves and high rate when 4 to 6 leaves.
|  | Annual ground cherry (*Physalis angulata*), Apple of Peru (*Nicandra physalodes*), Bellvine (*Ipomoea plebeia*), Cobbler’s pegs (*Bidens pilosa*), Star burr (*Acanthospermum hispidum*), Variegated thistle (*Silybum marianum*) | Qld, NSW, Vic, WA only |  | Variegated thistle should be less than 15 cm in diameter. Annual ground cherry should be less than 1.5 cm high.
|  | Anoda weed (*Anoda cristata*), Hairy wandering jew (*Commelina benghalensis*) | Qld only |  | Control of bellvine may be inconsistent if soil is dry.
|  |  |  |  | Apply when weeds are cotyledon to 3 leaves.

**CRITICAL COMMENTS**

8 weeks | Ensure weeds are less than 5 cm high. The addition of a non-ionic surfactant such as *BS1000 at 125 mL per 100 litres of the spray volume is necessary for optimum weed control in Tasmania. |

21 days | Apply low rate when weeds are cotyledon to 4 leaves and high rate when 5 to 8 leaves. Apply low rate when weeds are cotyledon to 3 leaves and high rate when 4 to 6 leaves. Apply when weeds are cotyledon to 4 leaves. Variegated thistle should be less than 15 cm in diameter. Annual ground cherry should be less than 1.5 cm high. Control of bellvine may be inconsistent if soil is dry. Apply when weeds are cotyledon to 3 leaves. |

8 weeks | Apply low rate when weeds are cotyledon to 4 leaves and high rate when 5 to 8 leaves. Apply low rate when weeds are cotyledon to 3 leaves and high rate when 4 to 6 leaves. Apply when weeds are cotyledon to 4 leaves. Variegated thistle should be less than 15 cm in diameter. Annual ground cherry should be less than 1.5 cm high. Control of bellvine may be inconsistent if soil is dry. Apply when weeds are cotyledon to 3 leaves. |

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**
WITHHOLDING PERIODS (WHP)
PEANUTS: DO NOT HARVEST FOR 21 DAYS AFTER APPLICATION.
BROAD BEANS, GREEN BEANS: DO NOT HARVEST FOR 5 WEEKS AFTER APPLICATION.
NAVY BEANS, RED KIDNEY BEANS, RED MEXICAN BEANS, SOYBEANS: DO NOT HARVEST FOR 8 WEEKS AFTER APPLICATION.

GENERAL INSTRUCTIONS
RESISTANT WEEDS WARNING

Apparent Bentazone 480 SL Herbicide is a member of the benzothiadiazole group of herbicides. Apparent Bentazone 480 SL Herbicide is a herbicide which inhibits photosynthesis at photosystem II. For resistance management Apparent Bentazone 480 SL Herbicide is a Group C Herbicide. Some naturally occurring weed biotypes resistant to Apparent Bentazone 480 SL Herbicide and other Group C herbicides, may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Apparent Bentazone 480 SL Herbicide or other Group C herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Apparent Pty Ltd accepts no liability for any losses that may result from the failure of Apparent Bentazone 480 SL Herbicide to control resistant weeds.

APPLICATION

Ground Application
Apparent Bentazone 480 SL Herbicide is a contact herbicide and therefore coverage of the foliage of weeds is essential. To obtain thorough coverage Apparent Bentazone 480 SL Herbicide should be applied through properly calibrated and maintained spray equipment at a volume of 220 to 440 L water per ha and pressure of 240 to 340 kPa. Coverage will be reduced if weeds are being shaded by the crop or any other factors such as drift or dusty leaves that prevent the herbicide reaching target leaves. Best results are obtained when conditions favour rapid growth.

Aerial Application (read instructions for ground application first)
Apply with aircraft fitted with either conventional boom and nozzles or with micronair rotary atomizers, flying between 3 to 4 metres above the ground. Booms should be fitted with D8 to D12 nozzles and calibrated to apply at least 50 L/ha with overlapping swaths to prevent striping. Micronairs should be calibrated to apply at least 35 L/ha with droplets between 200 to 250 microns and swaths overlapping to prevent striping. Avoid droplets smaller than 200 micron as they are susceptible to evaporation.

DO NOT APPLY under hot and dry conditions. Best results are obtained from late afternoon or early morning spraying.

DO NOT APPLY under strong or gusty wind conditions (more than 5 knots) as striping will occur.

Split Application
Weeds do not germinate at once and application should not be delayed to catch later germinations. When late germinations of weeds occur a second application is advisable before crop canopy closes.

The Effects of Stressed Weeds and Weather
Application is not recommended to crops suffering from stress induced by drought, water logging, hail damage, frost or injury from other pesticides or crop injury may occur. Such stress conditions may also harden weeds making them more difficult to kill. Apparent Bentazone 480 SL Herbicide is a water soluble concentration and hot, dry conditions may cause spray to evaporate reducing covering and the performance on weeds. Rain within eight hours of spraying is likely to reduce the effectiveness of Apparent Bentazone 480 SL Herbicide resulting in poor weed control.

Wetting Agent
In Tasmania (only) a non-ionic wetting agent such as *BS1000 at 125 mL per 100 litres of the volume should be added when Apparent Bentazone 480 SL Herbicide is sprayed on navy (Haricot) beans and green (Dwarf French) beans. In general, the addition of wetter does not improve control of weeds in other areas. However, with less susceptible weeds or if spray coverage is less than optimum the addition of *BS1000 may improve control.

MIXING
Apparent Bentazone 480 SL Herbicide mixes readily with water. Add the required amount of Apparent Bentazone 480 SL Herbicide to the spray tank when filling and agitate to give even mixing.

COMPATIBILITY
Apparent Bentazone 480 SL Herbicide can be applied after pre-planting application of trifluralin or EPTC.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Do NOT contaminate streams, rivers or waterways with Apparent Bentazone 480 SL Herbicide or used containers.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply under meteorological conditions or from spraying equipment which could be expected to cause spray to drift onto nearby susceptible plants, adjacent crops, crop lands or pasture.
CROP SAFETY

Beans: Green beans, navy beans, red kidney beans, red mexican beans: Beans are tolerant of Apparent Bentazone 480 SL Herbicide after the first two trifoliate leaves are fully expanded. There may be leaf scorch but this will not affect yields. DO NOT apply unless two trifoliate leaves are present except as per directions for use in Tasmania on green beans or severe damage may result. When used in Tasmania do not apply after flower bud formation.

Peanuts: Apply after the crop is 12 cm high.

Soybeans: Soybeans are tolerant of Apparent Bentazone 480 SL Herbicide at all stages of growth. Mild leaf scorching may occur but will not affect yield.

STORAGE AND DISPOSAL

Store in the closed, original container in a well-ventilated area, as cool as possible. Do NOT store for prolonged periods in direct sunlight. Triple or (preferably) pressure rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on-site. Break, crush, puncture and bury empty containers in a local authority landfill. If not available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and roots. Empty containers and product should NOT be burnt.

SAFETY DIRECTIONS

May irritate the eyes and skin. Avoid contact with eyes and skin. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia: 13 11 26.

SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet which is available from the supplier.

CONDITIONS OF SALE

The use of Apparent Bentazone 480 SL Herbicide being beyond the control of the manufacturer no warranty expressed or implied is given by Apparent Pty Ltd regarding its suitability, fitness or efficiency for any purpose for which it is used by the buyer, whether in accordance with the directions or not and Apparent Pty Ltd accepts with no responsibility for any consequences whatsoever resulting from the use of this product.
