ACTIVE CONSTITUENT: 600 g/L IMIDACLOPRID

GROUP 4A INSECTICIDE

For the control of various insect pests in a range of crops and the protection of spread of barley yellow dwarf virus in cereal crops, as specified in the Directions for Use.

IMPORTANT: READ THIS LEAFLET BEFORE USE.

APVMA Approval No: 68402/58290

### DIRECTIONS FOR USE

For ULV application: Imidacloprid 600 SC Insecticide can be bulked up with spraying oils for all uses except those indicated in the critical comments in the Direction for Use table below.

<table>
<thead>
<tr>
<th>Crop</th>
<th>Pest</th>
<th>Rate</th>
<th>Critical Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cotton</td>
<td>Thrips</td>
<td>875 mL or 1.17 L/100 kg seed</td>
<td>Thrips damage is dependent upon thrips infesting cotton seedlings and the subsequent growth rate of the plants. Choose a higher rate if thrips pressure is expected (e.g. winter cereal and weeds supporting thrips) and/or cotton seedlings are expected to experience slow growth (e.g. cool weather from early planting or sown in shorter season districts). The mid-rate is considered a general rate for normal conditions. When applied for thrips control, these rates will also control early season aphids. When applied for thrips control, these rates will also reduce damage to cotyledons caused by brown flea beetle. Use the higher rate for increased length of control. Apply only to high quality seed. Ensure thorough coverage of seed.</td>
</tr>

<tr>
<td>Canola</td>
<td>Aphids, Blue Oat mite, red</td>
<td>400 mL/ 100 kg of seed</td>
<td>Apparent Imidacloprid will protect canola seedlings from early season aphid damage. Apparent Imidacloprid will protect emerging seedlings for 3 - 4 weeks after sowing. Crops must be monitored in the first 4 weeks of emergence to ensure product performance. For autumn sowing: After a pasture phase sow Apparent Imidacloprid treated seed following a well timed spring spray (prior to the development of diapause eggs) of Le-Mat 290SL Insecticide. After a cropping phase a spring spray is not usually required, however if monitoring in spring finds moderate mite populations, a spring spray should be applied. For spring sowing: After a pasture phase apply a spray of omethoate prior to sowing Apparent Imidacloprid treated seed. Apparent Imidacloprid does not affect the viability of Rhizobia when Apparent Imidacloprid is mixed with inoculant and seed is sown immediately into moist soil. Use the higher rate for increased length of control and in areas of high risk.</td>
</tr>

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION**
WITHHOLDING PERIOD:
Cotton and food producing crops: NOT REQUIRED WHEN USED AS DIRECTED

GRAZING:
Maize, sorghum, or sweet corn plants growing from treated seed: DO NOT GRAZE OR CUT FOR STOCK
Cereal or lupins plants grown from treated seed: DO NOT GRAZE OR CUT FOR STOCKFEED FOR SIX WEEKS OF SOWING.

FOOD WITHIN 4 WEEKS OF SOWING.
Pasture, canola or forage brassica plants grown from treated seed: DO NOT GRAZE OR CUT FOR STOCKFEED FOR SIX WEEKS OF SOWING.

GENERAL INSTRUCTIONS
INSECTICIDE RESISTANCE WARNING

For insecticide resistance management Apparent Imidacloprid 600 SC Insecticide is a group 4A Insecticide. Some naturally occurring insect biotypes resistant to Apparent Imidacloprid 600 SC Insecticide and other Group 4A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if Apparent Imidacloprid 600 SC Insecticide and other group 4A insecticides are used repeatedly. The effectiveness of Apparent Imidacloprid 600 SC Insecticide on resistant individuals could be significantly reduced. Since the occurrence of resistant individuals is difficult to detect prior to use, Apparent Pty Ltd accepts no liability for any losses that may result from the failure of Apparent Imidacloprid 600 SC Insecticide to control resistant insects. Apparent Imidacloprid 600 SC Insecticide may be subject to specific resistance management strategies. For further information contact your supplier, Apparent Pty Ltd representative or local agricultural department agronomist.

Cotton
Mixing and seed treatment
Prior to pouring or pumping Apparent Imidacloprid 600 SC Insecticide from the container, either shake the container vigorously or pump by-pass to ensure thorough mixing of the contents. Flowable formulations will settle over time. Add most of the water into the mixing vat, followed by flowable fungicides (e.g. quintozene), coating agents (e.g. Peridam*, Nancret*) and Apparent Imidacloprid 600 SC Insecticide and stir until homogeneous. Then add the emulsifiable liquid fungicide (e.g. Apron* 200SL) slowly whilst stirring. Calibrate commercial seed dressing equipment to ensure the seed throughput is mixed with the correct dose of slurry seed dressing. Ensure the seed dressing mixture is applied to the maximum number of seeds when initially applied to the seed. Retain seed in mixing chamber until coverage on seed is good. Store treated seed under cover in cool, dry conditions. Do not treat seed with poor viability. Do not store treated seed near foodstuffs or where likely to prove hazardous to humans or animals.

Forage and seed pasture, canola, forage brassicas, lupins, summer crops
Mixing and seed treatment
Prior to pouring, shake container vigorously, then add the required quantity of Apparent Imidacloprid 600 SC Insecticide to sufficient water to give even coverage of the cereal seed to be treated. Place seed in mixing equipment and rotate. Mix Apparent Imidacloprid 600 SC Insecticide with sufficient water to give even coverage of seed and spray onto seed. For small seeds, apply a total volume of Apparent Imidacloprid 600 SC Insecticide plus water of 1.5 L/100 kg seed. For large seeds, apply a total volume of Apparent Imidacloprid 600 SC Insecticide plus water of 500 mL/100 kg seed. Continue rotation until all liquid is distributed on seed. Store treated seed under cover in cool, dry conditions. Do not treat seed with poor viability. Do not store treated seed near foodstuffs or where likely to prove hazardous to humans or animals. Do not carry over maize, sorghum, sunflower or sweet corn seed from one season to the next season. The insecticidal activity of Apparent Imidacloprid 600 SC Insecticide on the seed is maintained for a minimum of two seasons. Flow rate: Apparent Imidacloprid 600 SC Insecticide treated seed may slow flow rate of seed. Check flow rate of seed through sowing machinery before sowing to ensure the desired seeding rate is achieved.

Cereal crops
Mixing and seed treatment
Prior to pouring, shake container vigorously, then add the required quantity of Apparent Imidacloprid 600 SC Insecticide to sufficient water to give even coverage of the cereal seed to be treated. The quantity of water used for mixing will vary depending on type of equipment and quantity of seed. Use a minimum of 400 mL of mixture (product + water) with each 100 kg of seed. Whatever dilution is used it is essential that 120 mL or (240 mL) of Apparent Imidacloprid 600 SC Insecticide is applied/100 kg seed. The mixture should be gently stirred regularly.

Seed quality
Apparent Imidacloprid 600 SC Insecticide seed treatment should not be used on seed with more than 12% moisture content, or on sprung, sprouted, damaged or severely pinched seed of poor viability. If in doubt, have a germination test carried out on the seed before treatment to ensure that it is of acceptable standard. Treating with Apparent Imidacloprid 600 SC Insecticide as directed may raise the moisture level of the seed by up to 0.6%, depending on conditions at treatment. The use of Apparent Imidacloprid 600 SC Insecticide mixed with the water at recommended rates will have no effect on the storage life of treated sound seed.

Compatibility
Apparent Imidacloprid 600 SC Insecticide is compatible with Baytan* C Flowable Seed Dressing and Raxil* C Flowable Seed Dressing for use on cereal seeds. Do not use more than 600 mL of total mixture /100 kg seed (i.e. Apparent Imidacloprid 600 SC Insecticide plus Baytan or Raxil plus water). Apparent Imidacloprid 600 SC Insecticide may be applied with Jockey* Systemic Seed Fungicide or with Semevin* P Seed Dressing Insecticide.
Storage of treated seed
Do not store treated seed near foodstuffs or where likely to prove hazardous to humans or animals. If the seed is not used immediately after treatment it should be stored in a dry, well ventilated place. Although Apparent Imidaclorpid 600 SC Insecticide has no effect on the viability of treated seed, subsequent germination can be adversely affected by poor storage conditions such as high moisture combined with high temperatures. No liability can therefore be accepted for the performance of stored treated seed.

PRECAUTIONS
When treated seed is stored it should be kept apart from other grain and the bags or other containers should be clearly marked to indicate the contents have been treated with this product. Do NOT allow seed treated with this product to contaminate seed intended for human consumption. Do NOT use treated seed for human consumption. Do NOT use treated seed for human consumption. Bags which have held treated seed are not to be used for any other purpose.

PROTECTION OF LIVESTOCK
Seed treated with this product must not be used for animal consumption or poultry feed or mixed with animal feed. Do NOT allow seed treated with this product to contaminate seed intended for animal consumption.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Do NOT contaminate ponds, waterways and drains with this product, used containers or bags which have held treated seed. Do NOT feed treated seed or otherwise expose to wild or domestic birds. Any spillages of treated seed, however minor, must be cleaned up immediately, preferable by recovery and re-use. If disposal is required, ensure treated seeds are thoroughly buried and not accessible to birds and other wildlife.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to the spray tank. Do not dispose of undiluted chemicals on site. If recycling return clean containers to recycler or point of sale. If not recycling break, crush, or puncture and bury containers at a local authority landfill. If not available bury the container below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

SAFETY DIRECTIONS
Harmful if swallowed. Will irritate the eyes and skin. Repeated exposure may cause allergic disorders. Avoid contact with the eyes and skin. When opening the container and using the product, wear elbow length chemical resistant gloves. Wash hands after use. After each day’s use wash gloves.

MATERIAL SAFETY DATA SHEET
For further information refer to the Material Safety Data Sheet (MSDS), which is available from the supplier.

CONDITIONS OF SALE
The use of Apparent Imidaclorpid 600 SC Insecticide being beyond the control of the manufacturer, no warranty expressed or implied is given by Apparent Pty Ltd. regarding its suitability, fitness or efficiency for any purpose for which it is used by the buyer, whether in accordance with the directions or not and Apparent Pty Ltd accepts no responsibility for any consequence whatsoever from the use of this product.
